Portfolio: [sayonys-portfolio.vercel.app](https://sayonys-portfolio.vercel.app)

**Objective:** Data professional with experience in AI, workflow automation, SQL analytics, and applied machine learning. Improved reporting efficiency and data quality at Goldfinn Technologies through automated Python–MySQL pipelines and insight-driven analysis. Skilled in data analytics, time-series forecasting, predictive modelling, and Power BI.

## EXPERIENCE

### Data Analyst Intern — Goldfinn Technologies CWS (Sep 2025 – Feb 2026)

- Automated **Python + MySQL** reporting workflows using **n8n**, reducing manual tracking effort by **~40%** and enabling teams to deliver insights **~15% faster**.
- Built and validated **data pipelines for trademark tracking, brand monitoring**, and client-ready reports, improving consulting turnaround.
- Generated recurring **performance and trend reports** used in client consulting, enhancing evidence-based decisions and strategic recommendations.
- Partnered with engineering to resolve integration issues and improve data quality, reducing recurring discrepancies by **~30%**.

## TECHNICAL SKILLS

- Languages:** Python, SQL, Java, R, HTML, CSS, JavaScript
- Python Libraries:** Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn, PyTorch, Statsmodels
- Tools & Technologies:** Git, GitHub, Power BI, n8n, Vercel, MS Office, MongoDB, Postman, Swagger
- Concepts:** Data Analysis, Artificial Intelligence, Machine Learning, EDA, Forecasting, API Testing & Documentation
- Operations Research:** Linear Programming, Assignment Problems, Transportation Models, Network Analysis

## PROJECTS

### Gett Ride Failure Analysis — Product Analytics Case Study (Python, SQL, Pandas, Folium, H3)

Analyzed **10K+ ride failure records** from the **Gett ride-hailing platform (similar to Uber and Lyft)** using **SQL and Python** to investigate driver assignment delays, ETA patterns, demand spikes, and geographic failure hotspots through H3 hexagonal spatial clustering. Identified **peak failure periods at 8 AM and 9–11 PM, with ~70–75% of failures occurring before driver assignment**, indicating a supply–demand imbalance; recommended operational improvements including driver incentives during peak hours, improved dispatch algorithms, and dynamic driver positioning to reduce ride cancellations.

**GitHub:** <https://github.com/sayonyyy/gett-ride-failure-analysis>

### Customer Shopping Trends Analysis – (Python, SQL, PowerBI)

Analyzed an **Amazon/Mynta-style customer dataset** using **Python, MySQL, and Power BI**, engineering **18 features** and uncovering key patterns—**Young Adults** driving the highest revenue, **subscribers (27%)** showing higher loyalty, and **Clothing contributing 40%+ of sales**. Built an interactive dashboard and delivered insights supporting improvements in engagement, pricing, and product strategy.

**GitHub :** [https://github.com/sayonyyy/customer\\_trends\\_data\\_analysis-SQL-Python-PowerBI](https://github.com/sayonyyy/customer_trends_data_analysis-SQL-Python-PowerBI)

### Trade Forecasting (2025) – Linear Regression & ARIMA – (Pandas, Scikit-Learn, Statsmodel)

Developed a **trade forecasting model** using **UN Comtrade data**, applying **Linear Regression** for trend analysis and **ARIMA** for time-series patterns to generate reliable **import–export forecasts for 2025**.

**GitHub :** [https://github.com/sayonyyy/trade-export\\_import](https://github.com/sayonyyy/trade-export_import)

### DoorDash Delivery Duration Prediction – (Python, Pandas, Scikit-Learn)

Analyzed **177K+ DoorDash delivery records** to identify operational factors affecting delivery time. Conducted **exploratory data analysis and engineered features** capturing **driver availability, order complexity, and marketplace demand conditions**. Built and compared predictive models to estimate delivery duration, evaluating performance using RMSE and MAE. Identified key operational factors affecting delivery delays and evaluated their impact on estimated delivery time.

**GitHub:** <https://github.com/sayonyyy/doorDash-delivery-duration-prediction>

## ACADEMIC QUALIFICATION

- B.Sc. in Data Science:** Techno India University – 2027 (Pursuing)
- Class 12 (ISC):** St. Paul's Boarding & Day School – 2023
- Class 10 (ICSE):** St. Paul's Boarding & Day School – 2021

**Relevant Coursework:** SQL, Python, Machine Learning, Operations Research, Probability & Statistics.
