Portfolio: sayonys-portfolio.vercel.app

Objective: Data-driven analyst with hands-on experience in product analytics, SQL automation, and applied ML, seeking to bridge data and product strategy. At Goldfinn Technologies, built end-to-end data pipelines and translated analytical findings into business decisions, experience that maps directly to product discovery, feature prioritization, and cross-functional collaboration. Strong foundation in user behaviour analysis, KPI tracking, and working with engineering teams to ship data-quality improvements.

EXPERIENCE

Business & Data Analyst Intern – Goldfinn Technologies CWS (Sep 2025 – Feb 2026)

- Automated **Python + MySQL** reporting workflows using **n8n**, **reducing manual tracking effort by ~40%** and enabling teams to deliver to surface product insights **~15% faster**.
- Built and validated **data pipelines for trademark tracking, brand monitoring**, and client-ready reports, improving consulting turnaround.
- Built brand protection pipelines using **Selenium, Playwright & BeautifulSoup** for web crawling and **OpenCV** for logo detection across PDFs — aggregating findings into client reports and automating the workflow via **n8n**.
- Analyzed **marketing campaign performance across digital platforms** using KPI dashboards, identified underperforming ad spend, and **recommended budget reallocation** — translating findings into actionable business decisions.
- Partnered with engineering to **resolve integration issues** and improve data quality, reducing recurring discrepancies by **~30%**.

TECHNICAL SKILLS

- Languages:** Python, SQL, R
- Python Libraries:** Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn, PyTorch, Statsmodels, BeautifulSoup, OpenCV
- Tools & Technologies:** Power BI, Google Analytics (GA4), Excel, n8n (AI automation), Selenium, Playwright, GitHub, MongoDB, Postman
- Product & Analytics:** KPI tracking, A/B testing, User Behavior Analysis, PRD/Product Documentation, Market Analysis

CERTIFICATION

- Google Analytics Certification (GA4)** — Google Skillshop, April 2026
Credential ID: 180702869 | Link: skillshop.credential.net/7e89fd74-6bf0-4bd1-b849-9bc24e859945

PROJECTS

• OLX Verified Listing Feature – Product Requirements Document (PRD)

Designed a self-initiated **PRD proposing an OLX Verified Listing feature** to resolve **buyer-seller trust gaps**. Analyzed user behavior, defined personas, and mapped end-to-end transaction flows with **structured verification and pricing insights**. Introduced condition checklists, photo validation, and price benchmarking to streamline decision-making and reduce friction. Defined key metrics (**targeting +15% conversion**) and a phased rollout strategy to evaluate time-to-sale and trust impact.

Google Docs: <https://tinyurl.com/4whk5et>

• Gett Ride Failure Analysis – Market & Business Model Analytics (SQL, Python, and H3 spatial clustering)

Analyzed **Gett ride failure data** to study driver assignment delays, ETA patterns, demand spikes, and geographic failure hotspots. Found **peak failures at 8 AM and 9–11 PM, with ~70–75% occurring before driver assignment**, indicating a driver supply-demand imbalance. Simulated higher driver availability and estimated a **~10% reduction in peak-hour cancellations**, recommended targeted incentives and improved dispatch strategies.

GitHub: <https://github.com/sayonyyy/gett-ride-failure-analysis>

• Customer Behavior & Revenue Analytics – (Python, SQL, PowerBI)

Analyzed e-commerce transaction data to understand customer purchasing behavior and the impact of a **27% subscription user base** on spending. Performed customer segmentation, **Pareto analysis (top 20% customers driving ~31% of revenue)**, and **A/B testing to compare subscriber vs non-subscriber spending patterns**. Built a **PowerBI dashboard** and simulated subscription adoption scenarios to support data-driven marketing and product decisions.

• DoorDash Delivery Duration Prediction – (Python, Pandas, Scikit-Learn)

Analyzed **DoorDash delivery data** to track **key performance indicators** affecting delivery time. Performed exploratory data analysis and created features related to **driver availability, order complexity, and demand conditions**. Built **models to estimate delivery duration** and evaluated prediction accuracy using RMSE and MAE. Identified key operational factors contributing to **delivery delays and their impact on estimated delivery time**.

ACADEMIC QUALIFICATION

- B.Sc. in Data Science: Techno India University – 2027 (Pursuing)
- Class 12 (ISC): St. Paul's Boarding & Day School – 2023
- Class 10 (ICSE): St. Paul's Boarding & Day School – 2021
